Research,
Development

■ is a services company specialized in research, development and innovation for the pharmaceutical market in the European area.

Thanks to our wide catalogue of services, our high-performance equipment and a rigorous system of quality, we can offer effective solutions in time.

We are specialists in the formulation and design of manufacturing processes for medicines and also in the manufacture of medium and small industrial batches; development and validation of analytical methods, and manufacture and supply of the necessary products for clinical development of new medicines.

Our Company is a Pharmaceutical Laboratory that holds the GMP Certificate (Good Manufacturing Practices). We are also authorized as food supplement manufacturers.

I

We are committed with quality in all our services and therefore, all our results are certified by our Quality Control Department.

We always meet our deadlines, as we are well aware of the time constraints and quality requirements of our clients. All this is possible thanks to our staff, highly experienced in the field of research and development in the pharmaceutical industry. Our people is specialized in meeting the specific needs of each client.

SERVICES WE OFFER:

Selection of pharmaceutical forms, compatibility studies of active ingredients and excipients, design of qualitative and quantitative formulas, design of manufacturing methods, establishment of process controls and technology transfer to the client.

Adjustment and validation of analytical methods to control active ingredients, their impurities and degradation products in the raw material and the final product; control of the manufacturing process; "in vitro" dissolution studies, cleanliness and microbiological control.

Studies in ICH conditions, on going stability..

Manufacture of pilot batches and batches for clinical tests

Authorized GMP production facilities for manufacturing liquid and solid oral forms.

Manufacture of industrial batches

We can produce and manufacture small and medium-size batches.

Scale up batches.

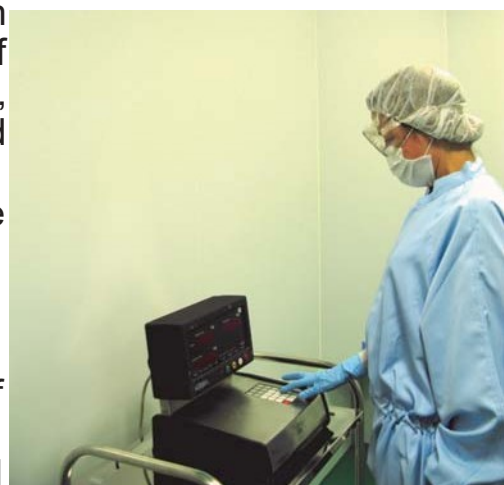

Optimization of the manufacturing processes and quality control of medicines

Optimization of production processes with objective of reducing production costs, improving manufacturing speed and using the technical capabilities of the production equipment.

Advisory Services

We provide a wide range of services adapted to the needs and the profile of every project and client.

We are located in a modern building in Alcorisa (Teruel, SPAIN) fitted with all the necessary installations and equipment to satisfy the increasing demand for pharmaceutical research and development services.

Our premises are made up of three large areas:

Destined to the formulation and the design of manufacturing processes in GMP conditions for different pharmaceutical forms, like liquids for external and internal use, staches, capsules and tablets

Destined to the adjustment, development and validation of analytical Technologies. It possesses equipment for making of stability studies.

Specialized in oral forms. We make tablets, capsules, sachets and liquids for external and internal use
